WHAT OUR STUDENTS SAY

“This horticulture program has granted me the opportunity to acquire the skills and knowledge necessary to further my education and follow my passion of growing food. Because of this program I have my dream job!”

— **Wendi Dunn**, Horticulture Certificate Student

Landscape Architecture

For more information call (310) 825-9414 or email landscapearchitecture@uclaextension.edu.

Note: The Landscape Architecture Program does not support AutoCAD on the Mac.

All CAD courses are fast-paced and complex; absence from any meeting is discouraged. The courses require at least three hours of computer work outside of class per week. Lab hours are not available; therefore, students must have access to their own hardware and software for the courses in which they enroll. Laptops are required for certain courses; check individual course descriptions for specifics.

FREE SOFTWARE AND SOFTWARE LICENSES

Certificate students may download AutoCAD for free upon proof of student status and may be eligible for academic rates on other software for their home computer. Prices and restrictions are subject to change. Software versions should reflect the version used in class as an older version may not possess the same interface or tools demonstrated in class. Each student must verify that his/her computer meets the software's minimum system requirements. For more information call (310) 825-9414.

ARCH X 472 Introduction to the Landscape Design Professions

Grading and Drainage

4.0 units

This course covers the basic grading and drainage techniques used in every landscape architecture project. Students learn the skills necessary to grade a site of moderate complexity while considering public health, safety, and welfare. Instruction covers contour signatures and contour manipulation by cutting and/or filling and stormwater management techniques including low-impact design, bioretention, and detention and retention areas. Basic grading formulas and cut and fill calculations are presented. The course also introduces landform grading and erosion control together with road and path layout and alignment for pedestrian and vehicular circulation.

Plant Identification: Trees

4.0 units

One of the two required plant material courses; focuses on plants, their communities, and place in the landscape. Instruction focuses on large-scale materials that often influence the landscape architect's overall site composition. This course concentrates on trees, shrubs and companion plant groupings, and planting location as design elements. Participants study plant texture, density, form, color, and other characteristics as articulators of space. Attention is given to cultural, taxonomical, and landscape maintenance idiosyncrasies. Each class meeting is either classroom/outdoors on campus or a field trip. Students must bring a camera to all classes.

Fundamentals of Exterior Lighting

2.0 units

Understanding how the eye functions as light levels change is critical to successful lighting design. In this course, students learn the unique lighting design skills of manipulating the eye through dark and light spaces and creating safe night spaces and compositions. The course highlights basic light concepts such as the lighting vocabulary, how the eye and brain function to provide vision, how we see light and how it affects what we "see," and how to quantify color for lighting design. The course covers various exterior lighting applications for roadways, sports lighting, retail/commercial, structures, parking lots, building exteriors, landscapes, and residential design. Instruction also covers the process of lighting design and its concepts, such as designing with respect to the dark sky and addressing safety and security.

Beginning Stormwater Management

2.0 units

Sustainable site planning requires understanding and calculating storm events and designing landscapes to capture, hold, and infiltrate stormwater through landscape designs that focus on several methods, from on-site retention and cisterns to green infrastructure, such as swales. This course showcases unique designs and describes the methods and calculations used to design stormwater BMPs for a site to appropriately accommodate seasonal stormwater within the Southern California region. This course will cover the California and City of Los Angeles regulatory requirements for stormwater and provide an overview of stormwater plan design hydrologic/hydraulic concepts, environmental site design, and non-proprietary stormwater BMPs, including critical design elements and typical stormwater plan compliance strategies.
